

COMPACT

STORAGE SYSTEMS

*Increasing Productivity &
Optimizing Space*

UTILIZING WAREHOUSE SPACE

An old saying in warehousing states: "If space is available, someone will fill it," *usually sooner rather than later.*

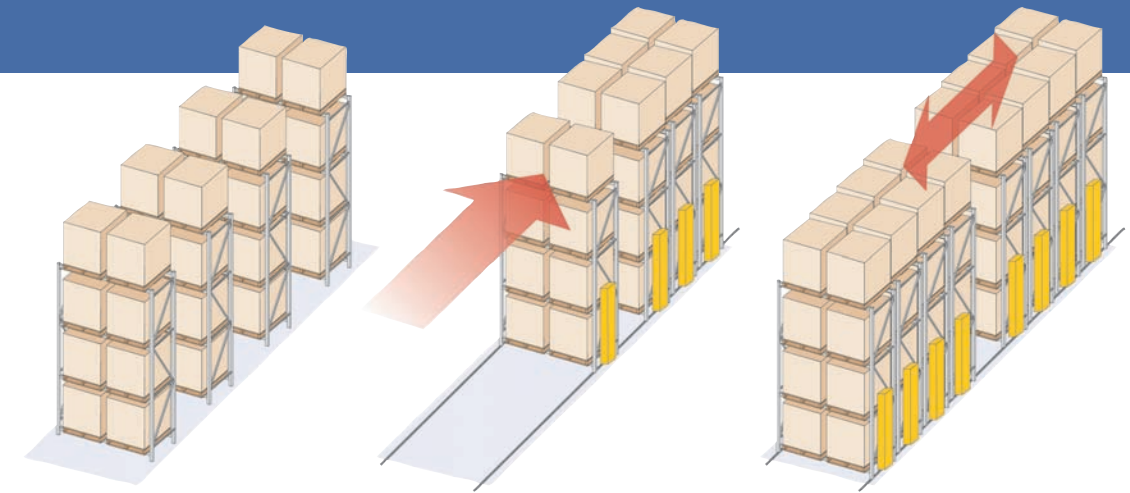

Warehouse space is typically designed to store goods and materials, as well as to allow for the regular circulation of the occupants, vehicles, and machinery that are usually associated with material handling. In many cases these layouts create wasted aisle space, consuming up to 40% of the total warehouse square footage.

Warehouses also routinely run out of space due to rapid growth, seasonal peaks, and large discount buying. Planned inventory builds for manufacturing shutdowns, facility consolidation, or even a slow sales period can also contribute to overwhelming space constraints.

COMMON CHALLENGES IN THE WAREHOUSING INDUSTRY INCLUDE:

- Being completely out of space and planning to increase off-site storage
- Not using existing space efficiently
- Facing obsolete facility layout due to changing business
- Suffering severe space shortage without budget approval for an addition
- Needing a new storage concept, but unable to determine what is best

Compact Storage Systems offers an innovative high-density storage solution that is custom fit to your needs.

WITHOUT COMPACT

Typically 60% of the floor space is wasted in non-productive access aisles. Only 40% is actually used for storage.

WITH COMPACT

Compact's mobile carriages eliminate all but one "moveable" access aisle to compact stored materials into 50% of the floor space, or less. Or a full 100% more storage is available within the original floor space area.

SIMPLE CONCEPT, CONSIDER THE BENEFITS

With today's emphasis on reduced inventory, rapid throughput and quick response to the market needs, an industrial storage system should have three qualities: fast, easy access with 100% selectivity, efficient cube utilization, and high return on investment (ROI) with quick payback.

The ideal storage system is an important contributor to workflow effectiveness and productivity. Whether for parts and materials, work in process or finished goods. Its main purpose is to store material to be used...not just to sit there. Storage is dynamic, not static. That's why **Compact's** high-density mobile storage systems are state-of-the-art for today's industries. They are designed for performance.

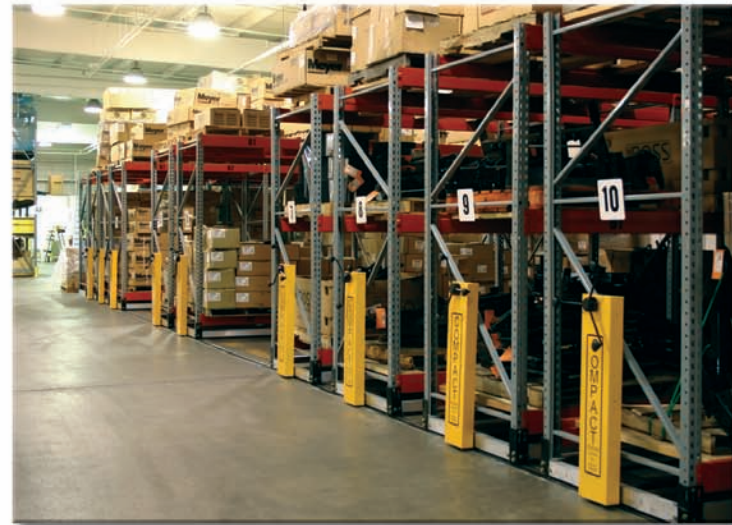

Anything that can be moved by a lift truck or crane can be stored on a Compact system. There are virtually no size, bulk, shape or weight design limits. So far, nobody has come up with a serious load requirement that we couldn't meet. And our systems can meet almost any building column or ceiling height restrictions.

Twice as much material or more can be stored in the same area. Or, half the space you need now can be used for some-thing else. By using less space, stored material can be located closer to the point of use for faster retrieval.

COMPACT SYSTEMS OFFER THE FOLLOWING BENEFITS:

- Incorporates drawers, shelves, bins, and racks to efficiently store parts and equipment of virtually any size or shape
- Accommodates existing pallet racks and shelving units
- Delivers twice the capacity of conventional storage
- Prevents theft with proven security features
- Reconfigures easily when systems requirements change
- Provides for material-handling equipment to drive over low-profile track
- Features anti-tip devices to guarantee system stability regardless of weight

EXCLUSIVE SHELVING AND RACKING COMPONENTS

Compact Storage Systems has teamed up with the Metalsistem® Group to bring you a complete solution for your warehousing and material handling space requirements. Adding to our already efficient use of warehousing space, we also offer the ease of integrating and expanding through a wide selection of modular products. These high quality, competitively priced racking and shelving solutions offer:

- Easily adjustable shelving
- Boltless, modular form
- High tech design
- Bright zinc coated finish
- Various heights, widths and depths
- Wide range of unique accessories
- Simple and quick assembly
- High load bearing capacities, exceptional strength
- Easy construction of two-tier installations

VERSATILE SOLUTIONS FROM COMPACT STORAGE SYSTEMS

Compact Storage Systems offers innovative solutions for the material handling industry through versatile product lines that are capable of handling a wide range of applications. Ask your Compact Storage Systems Representative for information on the complete line of storage solutions.

DISTRIBUTION PHILOSOPHY

In order to ensure the highest level of customer satisfaction possible, all Compact Storage Systems products and services are sold exclusively through the Compact Storage Systems Global Distribution Network. Our products are designed to provide increased productivity and space-optimization solutions, based on each customer's unique application requirements. Only through factory-trained sales and technical service representatives can we properly evaluate your specific needs and confidently recommend the most appropriate Compact solution.

From certified system installations to on-going maintenance and support, Compact sets the standard for professionalism, performance and responsiveness in our industry. We live up to our customer commitments and have the references to prove it.

Compact's professional distributors are proven problem-solvers who can expertly evaluate your storage needs. For a qualified professional assessment of your storage and production needs, contact a Compact distributor by visiting our website at www.compactstoragesystems.com or contact us at 1-866-767-1888.
